RADISSON MINING ANNOUNCES JOINT VENTURE WITH AURIZON MINES WILL NOT PROCEED AND EMBARKS ON TWO DRILL PROGRAMS

Rouyn-Noranda, Quebec: September 22, 2008. Radisson Mining Resources Inc. (RDS:TSXV) announced today that it could not reach agreement with Aurizon Mines Ltd. in respect of a proposed joint venture on Radisson's O'Brien/Kewagama property in northwestern Quebec (the "Property").

For approximately six months, Aurizon has been engaged in due diligence on the Property as agreed by a Letter of Intent ("LOI") dated April 14, 2008. The terms of this LOI would have entitled Aurizon to earn up to a 50% interest in the Property upon providing a bankable feasibility study on the Property. Subsequently, Aurizon requested that it be entitled to earn a 75% interest in the Property for such achievement and Radisson declined such proposal.

Radisson now intends to embark on two drill programs, one of which is on the O'Brien/Kewagama Property and the other is on Radisson's Destor/Duquesne property, as described below.

The O'Brien/Kewagama Property Radisson's main asset, the 100%-owned O'Brien/Kewagama Property, contains the former O'Brien Mine, which was known for its high gold grades and was considered to be the most important gold producer in the Cadillac Mining Camp in Québec when it was in operation from the early 1930s to the mid 1950s.

Radisson is now focusing on the 36 East Zone, a new gold-bearing zone located 2,500 feet east of the old O'Brien Mine, that contains comparable high grades of gold and on an area between the 36 Zone and the historic Kewagama Mine, immediately east of the O'Brien Property. Radisson was conducting advanced exploration work on the property, but suspended the program when the LOI was signed with Aurizon Mines.

In its 2007 NI 43-101 Report on the O'Brien Mine 36 Zone, Scott Wilson RPA concluded that "there is excellent potential to increase the Zone 36 East resources above the 2,000 Level and to discover new resources further at depth and along strike further to the east."

Radisson is currently reviewing all of the available surface diamond drill hole and historic underground information to select priority targets for drilling later in the fourth quarter of 2008.

The Destor/Duquesne Property The Destor/Duquesne Property, owned 100% by Radisson, is located along the Destor Porcupine Deformation Zone approximately 30 km north of the town of Rouyn-Noranda, Quebec. It adjoins the Duquesne Project currently being explored by Clifton Star Resources Inc. (« Clifton Star ») where 113.80 g/t Au over 3.60 metres was recently reported (See Clifton Star press release of August 20, 2008).

The Destor/Duquesne Property includes 1,400 metres of prospective geology along the Destor Porcupine Deformation Zone. The property has been worked by several exploration companies, the last of which was Hemlo Gold in 1993-04.

Gold mineralization on the Destor/Duquesne Property has been identified in several zones, the two most significant being the Zone Grise and the Lepine Zone. Both zones are believed to represent the possible strike extensions of the gold-bearing structures currently being explored by Clifton Star.

Drilling is expected to commence on the Destor/Duquesne Property once all necessary permits are in place.

The TSX Venture Exchange does not accept responsibility for the adequacy or accuracy of this release.
